

# ASX Announcements & Media Release

June 21, 2010

## Fast Facts

ASX Code: RNS  
Shares on issue: 60.7 million  
Cash at bank: +\$6 million

## Board & Management

Rick Hart, Chairman  
Justin Tremain, Managing Director  
Mel Ashton, Non-Executive Director  
Shane Hibbird, Exploration Manager  
Hamish Halliday, Consultant  
Steve Parsons, Consultant

## Shareholders

Gryphon Minerals  
Management  
Catalpa Resources  
Aust. & Overseas Institutional Investors  
Top 5 ~ 40%

## Company Highlights

- Near term gold production
- Dominant strategic tenement holdings
- Aggressive exploration
- Proven management

## Registered Office

Freemasons Hall  
181 Roberts Road  
SUBIACO WA 6008

## First Drill Hole at Mt Rankin intersects multiple zones of gold mineralisation

- **New shallow gold discovery**
- **Results include 4m @ 2.04g/t Au from 71m and 5m at 3.13g/t Au from 79m in multiple mineralised zones**
- **Along strike from significant gold deposits in the Southern Cross region including the Transvaal, New Zealand Gully, Golden Pig and Edwards Find mines**
- **Follow up drilling and initial drilling program at the Company's flagship Radio Gold Mine to commence in coming weeks.**

Recently listed Australian gold exploration company, Renaissance Minerals Limited (ASX code: RNS) is pleased to announce that the first hole drilled at its Mt Rankin Project, located approximately 15 kilometres south-west of Southern Cross, has intersected multiple zones of gold mineralisation.

### Significant multiple zones from the one RC drill hole include:

**4m @ 2.04g/t gold from 71m**

**5m @ 3.13g/t gold from 79m**

**1m @ 1.84g/t gold from 88m**

**2m @ 1.31g/t gold from 99m**

*Refer to Table One for complete drill intersections*

The results are significant as they are from a previously untested target area within a major gold producing region. The intersections are in the hanging wall of the regionally significant north-south striking Greenmount Fault which is associated with a number of the Southern Cross gold deposits.

The Transvaal, New Zealand Gully, Golden Pig gold mines to the north and the Edwards Find gold mine to the south are all along strike from the prospect and associated with the Greenmount Fault. The prospect has been named "Black and White Prospect" after nearby historical workings.

Follow up drilling is being planned to test the intersections down dip and along strike. This drilling is to occur following a drilling program about to commence at the Company's flagship project, the Radio Gold Mine.

### Southern Cross Project - Background

The Mt Rankin Project is within the Company's 800km<sup>2</sup> Southern Cross tenement package and located approximately 15 kilometres south west of the town of Southern Cross. The project contains the same rock sequence and fault structures that host major gold mines in the Southern Cross region. Over two million ounces of gold have been produced within 12 kilometres of the project.

The Company's flagship project, the Radio Gold Mine (also with the Southern Cross tenement package), is located approximately 40 kilometres north of Southern Cross. Prior to its closure in 1974, the Radio Gold Mine produced over 71,000 ounces of gold at an average grade of 38.5g/t gold. A drilling program is at Radio is to commence in the coming weeks.

Detailed information on all of Renaissance Minerals projects can be found on the Company's website at [www.renaissanceminerals.com.au](http://www.renaissanceminerals.com.au).

Yours faithfully  
**Renaissance Minerals Limited**

**Justin Tremain**  
Managing Director

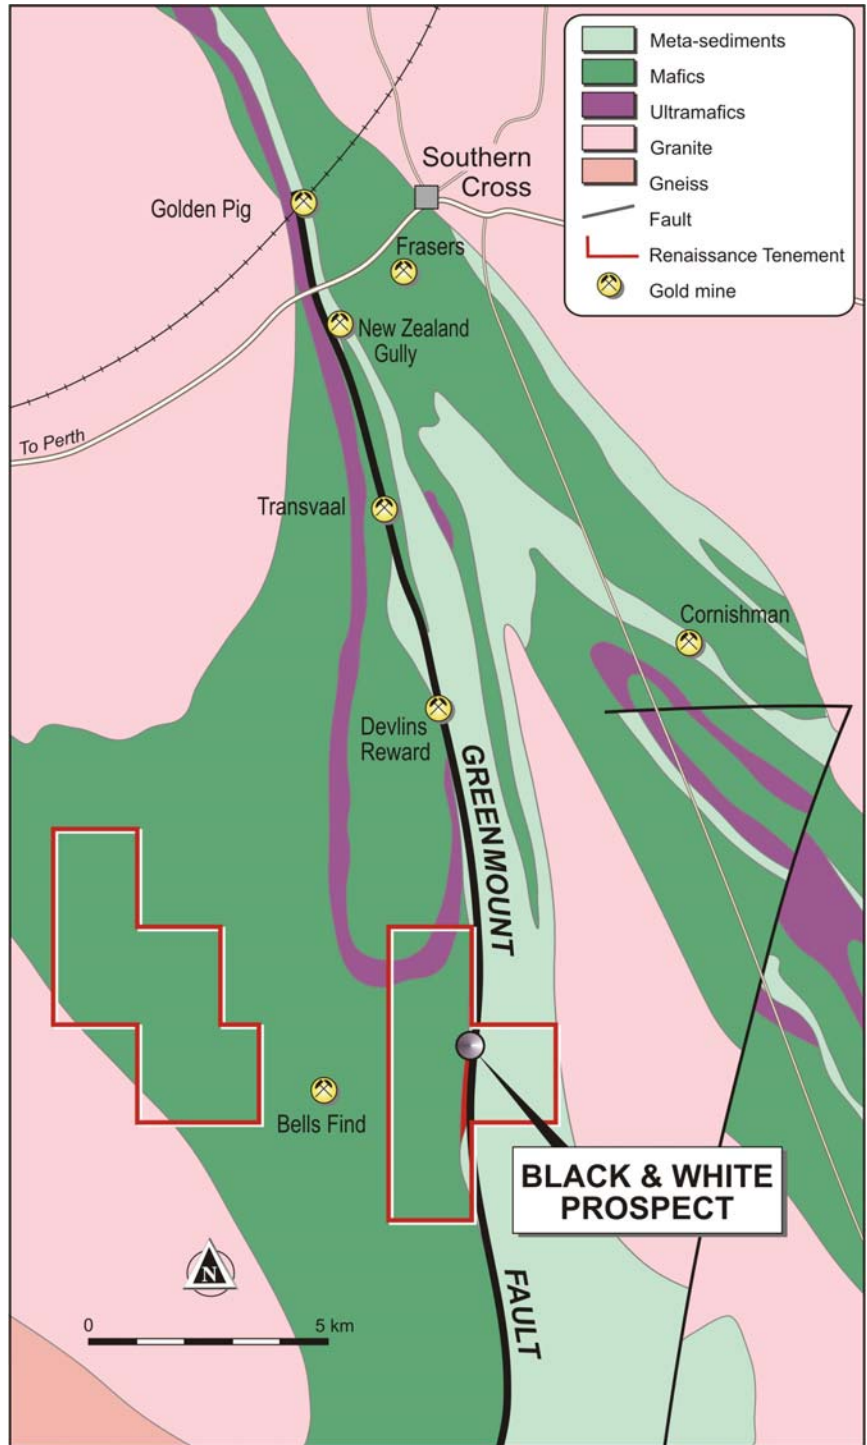

Table One: Reverse Circulation Drill Hole Summary

Hole Name	Easting	Northing	Azi	Dip	From (m)	To (m)	Interval (m)	Gold (g/t)
MTRCDD041	721950	6526100	270	65	71	101	30	1.08
		<i>Including</i>			71	75	4	2.04
		<i>Including</i>			79	84	5	3.13
		<i>Including</i>			88	89	1	1.84
		<i>Including</i>			99	101	2	1.31

Notes:

1. Samples are 1 metres
2. Assaying conducted by Genalysis Laboratory Services using industry standard 50g lead collection fire assay with AAS finish.
3. Reference standards, field duplicates and blank samples are routinely inserted; quality control samples are routinely monitored.

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Mr Shane Hibbird, who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Shane Hibbird is a full time employee of the company. Mr Shane Hibbird has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Shane Hibbird consent to their inclusion in the report of the matters based on his information in the form and context in which it appears.
